Explaining God is explaining why there is life in the universe. Before that, we explain physics. Let's talk about gravity. Gravity runs in a vacuum. Indeed our planet is attracted by the sun. It revolves around, thanks to a forces' balance. In the same way, our universe is attracted to another universe. That's why our universe is moving faster than light's speed.

Yet gravity is said to be a weak force. Despite everything, it can run in a vacuum, that is, thanks to another universe. We think that God is in another universe. When you look at gravity, represented by an arrow pulling an object, you can tell yourself that gravity is a force that pulls objects. Therefore, the vacuum pulls or pushes objects rather, to attract them to the other objects.

In the same way that our universe is attracted to another universe, life needs a soul mate, the right leg needs the left leg, the soul needs the other souls. We act according to our parents and our country's history to renew souls. God needs to create souls, unless universe creates souls, but God, perhaps born by chance, acts on our universe to create souls like him. Indeed, Jesus, who existed according to history, explains that humans will be in the same space as God. Perhaps we are called to join the universe where God is. That's what Christians taught. Christians bring the Christ's word, Christ who nailed us every time we heard it.

Gravity is an automatic force. It is believed that it does not need God to run. In the same way, atoms carry life in them. The atoms move to give cells. The entanglement that exists in atoms works on the same principle as gravity, only within atoms. Entanglement is the fact that an atom's part changes its value according to another atom's part, without time constraints. The atom's inside runs without time constraints. Gravity also runs without time constraints. It is believed that God also acts without time constraints apart from our own. Our universe is linked to the God's universe. However, entanglement brings different results from gravity, which created quantum physics that is opposed to relativity. The theory of everything tries to bring the two theories together. Formulas are created for this new theory. However, it is the authors' approach that allows us to advance. God is one. But souls like ours will surely join this other universe where there is God to surely help God. Surely God is using the universe's ability to create life. According to Jesus, some souls are destroyed and others are used. Jesus explained that only God chooses the souls he keeps.

### **My Notes**

If you do not understand God, then try to understand why there is life. This is a truth-seeking process.
