The First Life

The speed slows down with soul. The speed is faster outside the earth because the time scale is significantly larger. The speed is also faster in the universe than in sun's system. So the first life was created with an infinite universe's speed.

The soul can slow down the speed. Indeed, near-death experiences show that speed can be slowed down with soul. But our body gives us our speed.

So God runs at a speed that suits him. He can probably stop time. Surely the first life must have found a huge void when it was born. Life is a miracle.

My Notes

Write about life's creating.
